

Project Executable Files

Date	2July 2026
Team ID	xxxxxx
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files	NA
5	Environment configuration file (.env.example)	Yes
6	Deployed Application URL (if hosted)	No
7	APK / Executable Binary	NA
8	Dockerfile / Containerization	No
9	Test files and test results	Yes
10	Demo video / Walkthrough	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

emotion-detection-learning-support-engine/

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Local Streamlit Application)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Localhost / Streamlit
Repository Link	https://github.com/lokeshluckey2009-sys/emotion-detection-learning-support-engine
Demo Video Link	https://drive.google.com/file/d/1MVrm8P0jKFX3SyoWFsWQR82ysgXkMLes/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Windows 10/11
- Python 3.11+
- Git
- Visual Studio Code
- Internet connection (for Gemini API)
- Google Gemini API Key

Steps To Run Project:

Step 1: Clone the repository.

```
git clone https://github.com/lokeshluckey2009-sys/emotion-detection-learning-support-engine.git
```

Step 2: Move into the project directory.

```
cd emotion-detection-learning-support-engine
```

Step 3: Create a virtual environment.

```
python -m venv .venv
```

Step 4: Activate the virtual environment.

Windows

```
.\.venv\Scripts\Activate.ps1
```

Step 5: Install dependencies.

```
pip install -r requirements.txt
```

Step 6: Create a .env file and add your Gemini API key.

```
GEMINI_API_KEY=YOUR_API_KEY
```

Step 7: Start the application.

```
streamlit run app.py
```

Step 8: Open the browser.

<http://localhost:8501>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Google Gemini API requires an active internet connection.	Ensure internet access and a valid API key.
2	BERT model files are large and may not be included in GitHub due to storage limits.	Download the trained model separately or use Git LFS.
3	First model loading takes additional time.	Subsequent predictions are faster because models remain loaded in memory.
